Technical Information

- 3D-model building speed: 2 – 4 layers / minute, depending on resolution selected

- maximum building size: 254 mm * 381 mm * 203 mm (length * width * height)

- thickness of layers: selectable for printing, 0,089 mm – 0,102 mm

- material: high performance composite

- printing resolution: 600 dpi * 540 dpi

The printer accepts solid models in the following formats: STL, VRML, PLY and 3DS.

Transformation from GIS-files into printer-compatible formats will be provided by us upon request at additional costs.
